Mechanical seals

Piping plans

Seal supply systems

Configuration

1CW-FX
Configuration 1CW-FX (Contacting Wet – Fixed throttle bushing)

EagleBurgmann mechanical seals applicable for this configuration

**Seal type A**
- Balanced pusher seals
- API 682 4th edition
- STATIONARY (Balanced pusher seals)

**Seal type B**
- Metal bellows seals with O-Rings
- API 682 4th edition
- VERTICAL (Metal bellows seals with O-Rings)

**Seal type C**
- Metal bellows seals with flexible graphite
- API 682 4th edition
- VERTICAL (Metal bellows seals with flexible graphite)

Engineered seals

Beyond API specifications, EagleBurgmann offers a comprehensive range of engineered seals tailored to customer’s specification. Please inquire.

API piping plans applicable for 1CW-FX configuration

**Process side**

- **Plan 01** Integral (internal) recirculation from the pump discharge to the seal chamber
- **Plan 02** Dead-ended seal chamber with no recirculation of flushed fluid. Flush connections plugged
- **Plan 03** Circulation between the seal chamber and the pump created by the design of the seal chamber. Flush connections plugged
- **Plan 11 (12)** Recirculation from the pump discharge through a flow control orifice (in Plan 12 through a strainer and a flow control orifice) into the seal chamber
- **Plan 21 (22)** Recirculation from the pump discharge through a flow control orifice and back to the pump suction or pump suction piping

**Atmospheric side**

- **Plan 21** Recirculation from the pump discharge through a flow control orifice delivering the clean fluid in the seal chamber. The solids are delivered to the pump suction line
- **Plan 31** Recirculation from the pump discharge through a cyclone separator delivering the clean fluid to the seal chamber. The solids are delivered to the pump suction line
- **Plan 41** Recirculation from the pump discharge through a cyclone separator delivering the clean fluid to a cooler and then to the seal chamber. The solids are delivered to the pump suction line
- **Plan 51** Recirculation from the seal gland chamber through an external source to the atmospheric side of the seal face. The quench stream can be few pressures clean, dirty or clean water. (Plan 61: tapped and plugged atmospheric-side connections for purchaser’s use)

The API 682 4th edition

The new 4th edition of API 682 is in line with the latest achievements and current developments. EagleBurgmann offers the widest portfolio of seals and seal supply systems acc. to API 682 4th edition, and consequently has the optimum product for each API-compliant requirement:

- Technically mature, practical solutions that provide significantly greater safety and process reliability in refining technology, petrochemical, oil & gas and chemical industries.

Solutions for more safety and productivity

All the technical specifications are based on extensive tests and our many years of experience. However, the diversity of possible applications means that they can serve as guide values only.

**Important note**

All the technical specifications are based on extensive tests and our many years of experience. However, the diversity of possible applications means that they can serve as guide values only.

It should be noted that the external limits of each sealing parameter cannot be surpassed at any time because of leak detection. Furthermore, the operating range of each specific product depend on the respective shaft design, conditions under which operation and on the installation.

EagleBurgmann is one of the leading international system providers of sealing technology. For more than 20 years we have been actively contributing our expertise to developing and implementing the API 682 standard for the selection and application of seals and seal systems in centrifugal and rotary pumps.

EagleBurgmann is one of the leading international system providers of sealing technology.
Features
- Single seal
- Cartridge unit
- Category 1, Type A, Arrangement 1
- Balanced
- Independent direction of rotation
- Shrink-fitted seal face
- Solid mating ring

Advantages
- Insensitive to shaft deflections and process fluctuations
- Good heat dissipation
- Pre-assembled unit, ready to install
- Low space requirements
- Springs protected from the product

Recommended applications
- Chemical industry
- Petrochemical industry
- Oil and gas industry
- Highly volatile hydrocarbons
- Toxic and hazardous media
- Media with poor lubrication properties
- Low solids content and low abrasive media
- Vertical and horizontal ANSI chemical standard pumps

Operating range (see note on page 3)
- Shaft diameter: \( d_1 = 20 \ldots 110 \text{ mm (0.79" \ldots 4.33")} \)
- Pressure: \( p_1 = 22 \text{ bar (319 PSI)} \)
- Temperature: \( t = -40^\circ \ldots +176^\circ \text{C (-40" \ldots +349 °F)} \)
- Sliding velocity: \( v_g = 23 \text{ m/s (75 ft/s)} \)

Materials
- Seal ring: Blister resistant carbon, Silicon carbide SSiC (Q12)
- Mating ring: Silicon carbide SSiC (Q1)
- Secondary seals: EPDM (E), NBR (P), FKM (V), FFKM (K)
- Springs: Hastelloy® C-4 (M) and C-276 (M5)
- Metal parts: CrNiMo steel 316 (G) or equivalent, optional materials on request.
- * EagleBurgmann standard

Recommended piping plans
- Process side:
  - Chemical industry
  - Petrochemical industry
  - Oil and gas industry
  - Highly volatile hydrocarbons
  - Toxic and hazardous media
  - Media with poor lubrication properties
  - Low solids content and low abrasive media
  - Vertical and horizontal ANSI chemical standard pumps

- Atmospheric side:
  - 01, 02, 03, 11, 12, 13, 14, 21, 22, 23, 31, 41, 32

Item | Description

23 | Hexagon bolt
F | Flush
Q | Quench
D | Drain
WEF6 Water cooler

Features
Heat exchangers of the WEF6000-A4 range are used to cool process/barrier fluids in seal supply circuits. WEF6000-A4 heat exchangers are fully compliant with API 682 4th edition regulations. The process/barrier medium is directed through the tube, and the cooling medium is directed through the shell.

Venting and draining of the process/barrier medium side as well as the cooling water side is ensured. In addition, the heat exchangers can also be combined with a temperature instrument in the supply line to the mechanical seal (optional in accordance with API 682 4th edition).

Advantages
• Operating limits up to 45 bar/260 °C (653 PSI/500 °F) (tube side): suitable for a wide range of demanding operating conditions.
• Cooling water side and process side can be completely vented and drained.
• Seamless pipes on process side
• Special design without welding inside the cooler
• Higher cooling water velocity due to innovative cooler design
• Stainless steel 316L: high resistance to corrosive media

Recommended applications
• Refining technology
• Oil and gas industry
• Petrochemical industry
• Chemical industry
• Power plant technology

Notes
Design and production in accordance with EU Pressure Equipment Directive PED 97/23 EC.
Cleaning: Process/barrier medium side and cooling water side: flush with a suitable solvent.

Notes:
1) Design data, permissible working values depend on the actual conditions of service.
2) Guidelines with buffer/barrier fluid water 60 °C (140 °F) – cooling water 20 °C (68 °F).
3) Guidelines with buffer/barrier fluid oil 60 °C (140 °F) – cooling water 20 °C (68 °F).
Heat exchangers of the WEL6000-A4 range (shown here: WEL6002-A4) are used to cool process/barrier fluids in seal supply circuits. The heat exchangers are made of helical, laserwelded finned tubes. The cooling medium is ambient air. It is important, therefore, for WEL heat exchangers to be installed in well ventilated places indoors or, ideally, outdoors. There is a choice of three different basic versions of the WEL6000-A4 range as well as supplied fully assembled together with valves, base frame and other system components.

**Advantages**
- Operating limits up to 44 bar/260 °C (638 PSI/500 °F) (tube side): suitable for a wide range of demanding operating conditions.
- Can be completely vented and drained
- Seamless pipes
- Stainless steel 316L: high resistance to corrosive media

**Recommended applications**
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

**Features**

**Design and production in accordance with EU Pressure Equipment Directive PED 97/23 EC.**

**Design, calculation and production acc. to ASME VIII, Div. 1 (cooler not subject to ASME stamp requirements, piping <6”)**

**Notes**

**Features**

The measuring unit of the SPT6000-A4 range is used to visually monitor the operating temperature.

The measuring unit consists of a bi-metallic temperature gauge (NG100) with protective sleeve installed in a measuring block incl. drain connection.

**Advantages**

- Operating limits up to 45 bar/260 °C (653 PSI/500 °F) (design parameters)
- Temperature indicating range up to 200 °C (392 °F)
- Wetted parts: Stainless steel 316L for high resistance to corrosive media

**Recommended applications**

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

ZY6000-A4 range is available in three versions:

**ZYA6000-A4:**
Cyclone separator for high flow rates and high pressures.

**ZYB6000-A4:**
Cyclone separator for high flow rates and high pressures; 100 % X-ray capability.

**ZYC6000-A4:**
Cast version, block-type design with integral flanges.

### Advantages
- Contamination is automatically conveyed to the suction nozzle of the pump: maintenance-free mode of operation for guaranteed reliability
- High filtration efficiency
- Wide range of products for the optimum solution for every application
- ZYA6000-A4 and ZYB6000-A4: available for operating pressures of up to 200 bar (2,900 PSI)
- ZYC6000-A4 in block-type design with integrated flange connections: low space requirements because of compact design

### Functional description
Cyclone separators of the ZY6000-A4 range are used to clean mainly aqueous liquids containing contamination such as dirt and solids (e.g., in circulation systems of sewage, sludge or pipeline pumps).

The best possible filtration efficiency is achieved when the specific weight of the solids is much higher than that of the carrier liquid and when the differential pressure is as large as possible within the permissible pressure range (min. 1.7 bar (24.7 PSI) in accordance with API 682). The viscosity of the medium is a factor that also needs to be taken into account.

### Recommended applications
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

### Installation
P&ID for ZY6000-A4 Cyclone separators

- Contaminated liquid IN
- Clean liquid OUT
- Separated liquid OUT

The EagleBurgmann flush unit of the SPX6000-A4 range consists of a manifold with integrated inline filter supplied together with a needle valve and pressure gauge. Optional available with temperature gauge and/or flow indicator. The unit is used to control the flushing of a mechanical seal.

**Features**

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

**Advantages**

- Compact design due to integral filter
- Modular concept – optimal monitoring equipment available

**Recommended applications**

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

**Functional description**

The SPX6000-A4 flush unit continuously supplies flushing media from an external source to the mechanical seal. This plan is almost always used in combination with a throat bushing which serve as a throttle device to maintain a higher pressure in the stuffing box to isolate the pumped product from the seal chamber.

Features

The EagleBurgmann leakage control systems of the LSA6000 range in accordance with API Plan 65A consist of a leakage collection tank with integrated orifice and overflow pipe. The level can be monitored with the differential pressure transmitter which is supplied together with a five-way manifold valve.

Advantages

- Seal failure detection
- Safe discarding of excessive seal leakage
- To ensure durability, all components are corrosion resistant.

Recommended applications

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

Functional description

In accordance with API Plan 65A, the LSA6000 leakage control system is used to discharge leakage from single seals. The outboard leakage is collected in an external tank; the leakage volume is monitored (level in the tank).

Notes

3rd party inspection, ASME stamp on request.

Features
In accordance with API Plan 65B, the EagleBurgmann leakage control systems of the LSB6000 range consist of a leakage collection tank with valve and overflow pipe. The level can be monitored with the differential pressure transmitter which is supplied together with a five-way manifold valve.

Advantages
- Seal failure detection
- Safe discarding of excessive seal leakage
- To ensure durability, all components are corrosion resistant

Recommended applications
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

Functional description
In accordance with API Plan 65B, the LSB6000 leakage control system is used to discharge leakage from single seals. The outboard leakage is collected in an external tank, the leakage volume is monitored (level in the tank).

Notes
Design and production available in accordance with EU Pressure Equipment Directive PED 97/23 EC. Design, calculation and production available acc. to ASME VIII, Div. 1. 3rd party inspection, ASME stamp on request.

QFT6 Quench system

Features
Quench fluid supply systems are used with single mechanical seals. They act as a convenient fluid reservoir. The QFT6000-A4 stainless steel tank is equipped with a sight-glass for monitoring the MIN/MAX filling level and can be fastened with a lug fixture.

Advantages
- Sight-glass for MIN/MAX monitoring has a large indicator area
- Filling is possible by filling filter or a separate pipe connection
- Combined filling and ventilation filter in the quench fluid tank for reliable operation
- Tank made of 1.4571: high resistance to corrosive media

Recommended applications
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

Function description
Quench fluid systems (Plan 51) are employed to:
- Absorb leakage
- Monitor the leakage rate (e.g., through periodic reading of the level in the tank)
- Prevent icing
- Protect against dry running
- Stabilize the lubricating film
- Exclude air from the media in order to prevent a reaction with oxygen in the air

1) Design data, permissible working values depend on the actual conditions of service.
The EagleBurgmann leakage control systems of the SPP6006-A4 range consist of a pressure transmitter which is supplied together with a block and bleed valve.

**Features**

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

**Advantages**

- Compact design
- Easy to integrate in existing piping systems.

**Recommended applications**

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

**Functional description**

The SPP6006-A4 leakage control system is used to detect leakage from single seals. In case of a seal failure, the SPP6006-A4 is required to monitor excessive leakage. If the seal leakage exceeds a certain value, the bushing/orifice will limit the amount of leakage leaving the seal gland. Consequently the pressure will increase on the upstream side of the inner bushing. The pressure is monitored by means of the transmitter which will provide information about seal performance and seal failure.

Our service modules

The modular seal service offered through TotalSealCare is as individual as are the demands of our customers. The range of services spans complete maintenance of all installed seals, through to stock management, as well as engineering, training and electronic data documentation.

Our TotalSealCare services consist of individual modules from which we assemble individualized service packages.

You can benefit from our many years of experience and expertise in all areas of seal technology, and our major store of practical knowledge.

Consulting & engineering

After establishing and analyzing all of the seals in a system, we work out standardization concepts based on the as-is status. The results we are hoping for are to reduce the number of seal types, sizes and materials used, and to improve the key figures of the system. We advise you relating to codes of practice and statutory regulations, and indicate what actions need to be taken.

Maintenance

In the plant or in the service center, qualified fitters and technicians look after all the aspects of seal maintenance: installation, startup, servicing, conversion, overhaul and repair. We record and document functionally relevant data (fault causes, measures for repair, costs). This means it is possible to assess seal operating times and maintenance costs on a continuous basis, thereby defining measures for extending service intervals.

On-site service

Our on-site service includes the components of an overhaul service, conversions and service container. We deploy a service unit directly on your premises: equipped with the basic suite of seals or a stock of seals discussed with you in advance, and staffed by qualified personnel. On-site, our work includes producing the necessary gaskets, ensuring that the documentation is complete and advising our customers on selecting and installing seals. Our range of services is rounded off by complete conversions (e.g. acc. to TA-Luft).

Inventory management

Based on your individual requirements and the applicable quality regulations, we develop a concept for inventory management of complete seals and spare parts. Furthermore, we optimize stocking on site or in the EagleBurgmann service center. In this way, you can reduce your administration overhead and concentrate on your key operations.

Seminars & training

We offer an extensive range of continuing education programs in seal technology. For service and maintenance personnel, skilled staff and engineers from various branches of industry such as refining, chemicals, power generation, foodstuffs, paper and pharmaceuticals. Our range includes group seminars, individual training and seminars specifically tailored to your requirements. At our premises or at a location of your choice.

Technical analysis & support

A team of seal specialists is responsible for rectifying process malfunctions or "bad actors". The latest methods such as thermography or data logging are used for diagnosing positions that are critical for the operation of the system and for working out measures to rectify them. In our research and development centers, we perform realistic tests on test rigs or in original pumps. The objective is to extend the MTBF and to increase system serviceability by individual and constructive solutions.

Service agreements

We offer our customers specific agreements that can be combined from the six service modules. Whether for individual seal systems, critical process elements, specific system areas or an extensive seal service for complete plants: the modular structure of our service makes it possible to satisfy individual requirements. With our tried-and-tested monitoring instrument, SEPRO, we can also record all data relevant for the seals for documentation and evaluation purposes.
EagleBurgmann is one of the internationally leading companies for industrial sealing technology. Our products are used everywhere where safety and reliability are important: in the oil and gas industry, refining technology, the petrochemical, chemical and pharmaceutical industries, food processing, power, water, mining, pulp & paper, aerospace and many other spheres. Every day, more than 6,000 employees contribute their ideas, solutions and commitment towards ensuring that customers all over the world can rely on our seals. Our modular TotalSealCare service underlines our strong customer orientation and offers tailor-made services for every application.
