Engineered seals

Beyond API specifications, EagleBurgmann offers a comprehensive range of engineered seals tailored to customer’s specification. Please inquire.

API piping plans applicable for 2CW-CS configuration

**Process side**

- **Plan 01** Integral (internal) recirculation from the pump discharge to the seal chamber.
- **Plan 02** Dead-ended seal chamber with no recirculation of flushed fluid; Flush connections plugged.
- **Plan 03** Circulation between the seal chamber and the pump created by the design of the seal chamber. Flush connections plugged.
- **Plan 11 (12)** Recirculation from the pump discharge through a flow control orifice into the seal chamber.
- **Plan 13** Recirculation from the seal chamber through a flow control orifice and back to the pump suction or pump suction piping.
- **Plan 14** Recirculation from the pump discharge through a flow control orifice to the seal and simultaneously from the seal chamber through a flow control orifice to the pump suction.
- **Plan 21 (22)** Recirculation from pump discharge through a strainer, a flow control orifice and a cooler (in Plan 22 through a strainer, a flow control orifice and a cooler) into the seal chamber.
- **Plan 23** Recirculation from a circulation device in the seal chamber through a cooler and back into the seal chamber.

**Between seals**

- **Plan 31** Recirculation from the pump discharge through a cycloidal separate delivering the clean fluid to the seal chamber. The solids are delivered to the pump suction line.
- **Plan 41** Recirculation from the pump discharge through a cycloidal separate delivering the clean fluid to a cooler and then to the seal chamber. The solids are delivered to the pump suction line.
- **Plan 52** Injection of clean fluid into the seal chamber from an external source.
- **Plan 71** Tapped connections for the purchaser’s use e.g., for future use of buffer gas.
- **Plan 72** Externally supplied buffer gas for one or two unpressurized seals with or without containment seal (2CW-CS and 2NC-CS). Buffer gas is maintained at a pressure lower than the seal chamber pressure. The buffer gas pressure should not exceed 0.7 bar (10 PSI).
- **Plan 75** A containment seal chamber leakage collection system for containing or mixed phase leakage on arrangement 2 unpressurized seals with containment seals (2CW-CS and 2NC-CS).
- **Plan 76** A containment seal chamber leakage collection system for non-condensing or mixed phase leakage on arrangement 2 unpressurized seals with containment seals (2CW-CS and 2NC-CS). Used if the pumped fluid does not condense at ambient temperatures.
- **Plan 99** Engineered piping plus not defined by other existing plans.

**Products**

- **21 (22), 23** WEF6 Water cooler, WEL6 Air cooler, SPF6 Temperature indicator
- **31** ZV66 Cyclone separator
- **41** WEF6 Water cooler, WEL6 Air cooler, SPF6 Temperature indicator, ZV66 Cyclone separator
- **32** SPX6 Flush unit
- **72** GSS6000 Gas supply system
- **75** LSC6 Leakage collection reservoir
- **76** SPP6 Leakage detection system
- **99** Engineered to customer’s specification

**Important notes**

All the technical specifications are based on extensive tests and our many years of experience. However, the diversity of possible applications means that they can serve as guide values only. It should be noted that the extremal values of each operating parameter cannot be applied at the same time because of their restrictions. Furthermore, the operating range of each specific product depends on the respective design. Therefore, seal users must cooperate and consult with our specialists.

When critical conditions of operation are involved, we recommend a guarantee can only be given in the individual case if the exact conditions of application are known and these are confirmed in a special agreement. A guarantee can only be given if the individual case of the exact conditions of application are known and these are confirmed in a special agreement. When critical conditions of application are involved, it is recommended consulting with our specialist engineers.

EagleBurgmann is one of the leading international system providers of sealing technology. For more than 20 years we have been actively contributing to developing and implementing the API 682 standard for the selection and application of seals and supply systems in centrifugal and rotary pumps.
**Features**

- API 682 Category 2 and 3, Type A, Arrangement 2 seal
- Dual seal in face-to-back arrangement
- Dry contact outer seal (containment seal)
- Balanced
- Cartridge unit
- Rotating multiple springs

**Advantages**

- Universally applicable both for retrofits or original equipment
- Efficient stock keeping due to standardized components
- Extended selection of materials
- Metal parts also in special materials available
- Safe operation due to metal torque transmission at the rotating carbon seal rings

**Recommended applications**

- Refining technology
- Petrochemical industry
- Oil and gas industry
- Media with gaseous leakage
- API 610/ISO 13709 pumps
- Process pumps

**Operating range (see note on page 3)**

**Materials**

- Seal rings: Blister resistant carbon,
  - Silicon carbide SSIC (Q1), RBSIC (Q2)
- Matting rings: Silicon carbide SSIC (Q1), RBSIC (Q2)
- Secondary seals: EPDM (E), NBR (P), FKM (V), FFKM (K)
- Springs: Hastelloy® C-276 (M5)
- Metal parts: CrNiMo steel 316 (G) or equivalent, optional materials on request.

**Recommended piping plans**

- Process side:
  - 01, 02, 03, 11, 12, 13, 14, 21, 22, 23, 31, 32, 41
- Between seals: 71, 72, 75, 76

- CSV: Containment seal vent
- CSD: Containment seal drain
- GBI: Gas buffer IN
**Features**
- API 682 Category 2 and 3, Type A, Arrangement 2 seal
- Dual seal in face-to-back arrangement
- Dry contact outer seal (containment seal)
- Balanced
- Cartridge unit
- Solid seal faces

**Advantages**
- Outer seal which can be used for flashing as well as non-flashing applications prevents hazardous emissions in case of inboard seal failure
- Low heat generation and power consumption due to narrow seal face width of inner seal
- Longer seal life
- Pressure-balanced design prevents mating ring being forced out under reverse pressure
- No damage to shaft sleeve as dynamic O-Ring is not in direct contact with the sleeve

**Recommended applications**
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Highly volatile hydrocarbons
- LPG plants
- API 610/ISO 13709 pumps
- Process pumps

**Operating range** (see note on page 3)
- Shaft diameter: \( d_1 = 20 \text{ ... } 110 \text{ mm (0.79" ... 4.33")} \)
- Pressure (primary seal): \( p = \text{vacuum ... 42 bar (0 ... 609 PSI)} \)
- Pressure (secondary seal): \( p = 2.75 \text{ bar (40 PSI)} \) normal operation, max. 60 bar (870 PSI) in wet operation
- Temperature: \(-40 \text{ °C ... +176 \text{ °C (–40 °F ... +349 °F)}*} \)
- Sliding velocity: ... 23 m/s (... 75 ft/s)
* Engineered up to 260 °C (500 °F) with FFKM (K) secondary seals

**Materials**
- Seal ring (primary seal): Blister resistant carbon,
- Silicon carbide SSC (Q1), RBSiC (Q2)
- Seal ring (secondary seal): Special carbon
- Mating rings: Silicon carbide SSC (Q1), RBSiC (Q2)
- Secondary seals: FKM (V), FFKM (K), EPDM (E), NBR (P)
- Springs: Hastelloy® C-276 (M5)
- Metal parts: CrNiMo steel 316 (G)

**Recommended piping plans**

- Metal parts: CrNiMo steel 316 (G)

**Recommended piping plans**
- Process side:
  - O1, O2, O3, 11, 12, 13, 14, 21, 22, 23, 31, 32, 41
- Between seals: 71, 72, 75, 76
**WEF6 Water cooler**

**Features**
- Heat exchangers of the WEF6000-A4 range are used to cool process/barrier fluids in seal supply circuits. WEF6000-A4 heat exchangers are fully compliant with API 682 4th edition regulations. The process/barrier medium is directed through the tube, and the cooling medium is directed through the shell.
- Venting and draining of the process/barrier medium side as well as the cooling water side is ensured. In addition, the heat exchangers can also be combined with a temperature instrument in the supply line to the mechanical seal (optional in accordance with API 682 4th edition).

**Advantages**
- Operating limits up to 45 bar/260 °C (653 PSI/500 °F) (tube side): suitable for a wide range of demanding operating conditions.
- Cooling water side and process side can be completely vented and drained.
- Seamless pipes on process side
- Special design without welding inside the cooler
- Higher cooling water velocity due to innovative cooler design
- Stainless steel 316L: high resistance to corrosive media

**Recommended applications**
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

**Notes**
- Design and production in accordance with EU Pressure Equipment Directive PED 97/23 EC.
- Design, calculation and production acc. to ASME VIII, Div. 1 (cooler not subject to ASME stamp requirements, piping <6")
- Cleaning: Process/barrier medium side and cooling water side: flush with a suitable solvent.

Other versions on request.

1) Design data, permissible working values depend on the actual conditions of service.
1) Guidelines with buffer/barrier fluid water 60 °C (140 °F) – cooling water 20 °C (68 °F).
2) Guidelines with buffer/barrier fluid oil 60 °C (140 °F) – cooling water 20 °C (68 °F).
**Features**

Heat exchangers of the WEL6000-A4 range (shown here: WEL6002-A4) are used to cool process/barrier fluids in seal supply circuits. The heat exchangers are made of helical, laserwelded finned tubes. The cooling medium is ambient air. It is important, therefore, for WEL heat exchangers to be installed in well ventilated places indoors or, ideally, outdoors. There is a choice of three different basic versions of the WEL6000-A4 range as well as supplied fully assembled together with valves, base frame and other system components.

**Advantages**

- Operating limits up to 44 bar/260 °C (638 PSI/500 °F) (tube side): suitable for a wide range of demanding operating conditions.
- Can be completely vented and drained
- Seamless pipes
- Stainless steel 316L: high resistance to corrosive media

**Recommended applications**

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

4) Version with screwed connection G1/2" available as an option.
Features

The measuring unit of the SPT6000-A4 range is used to visually monitor the operating temperature. The measuring unit consists of a bi-metallic temperature gauge (NG100) with protective sleeve installed in a measuring block incl. drain connection.

Advantages

- Operating limits up to 45 bar/260 °C (653 PSI/500 °F) (design parameters)
- Temperature indicating range up to 200 °C (392 °F)
- Wetted parts: Stainless steel 316L for high resistance to corrosive media

Recommended applications

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

ZYA6 Cyclone separator

Features
The ZYA6000-A4 range is available in three versions:

ZYA6000-A4:
Cyclone separator for high flow rates and high pressures.

ZYB6000-A4:
Cyclone separator for high flow rates and high pressures; 100 % X-ray capability.

ZYC6000-A4:
Cast version, block-type design with integral flanges.

Advantages
- Contamination is automatically conveyed to the suction nozzle of the pump: maintenance-free mode of operation for guaranteed reliability
- High filtration efficiency
- Wide range of products for the optimum solution for every application
- ZYA6000-A4 and ZYB6000-A4: available for operating pressures of up to 200 bar (2,900 PSI)
- ZYC6000-A4 in block-type design with integrated flange connections: low space requirements because of compact design

Functional description
Cyclone separators of the ZYA6000-A4 range are used to clean mainly aqueous liquids containing contamination such as dirt and solids (e.g., in circulation systems of sewage, sludge or pipeline pumps).

The best possible filtration efficiency is achieved when the specific weight of the solids is much higher than that of the carrier liquid and when the differential pressure is as large as possible within the permissible pressure range (min. 1.7 bar (24.7 PSI) in accordance with API 682). The viscosity of the medium is a factor that also needs to be taken into account.

Recommended applications
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

Features
The EagleBurgmann flush unit of the SPX6000-A4 range consists of a manifold with integrated inline filter supplied together with a needle valve and pressure gauge. Optional available with temperature gauge and/or flow indicator. The unit is used to control the flushing of a mechanical seal.

Advantages
• Compact design due to integral filter
• Modular concept – optimal monitoring equipment available

Recommended applications
• Refining technology
• Oil and gas industry
• Petrochemical industry
• Chemical industry
• Power plant technology

Functional description
The SPX6000-A4 flush unit continuously supplies flushing media from an external source to the mechanical seal. This plan is almost always used in combination with a throat bushing which serve as a throttle device to maintain a higher pressure in the stuffing box to isolate the pumped product from the seal chamber.

\(^1\) Design data, permissible working values depend on the actual conditions of service.
Features
- Safe operation due to incorporated pressure regulator with upstream filter
- System mounted on a plate
- Easy wall or rack mounting

Advantages
- Coalescing filter with integrated sight-glass for monitoring liquid level to ensure safe operation even in case of poor gas quality.
- Rigid base frame for easy rack mounting.
- Wide range of flow monitoring to ensure utmost reliability of mechanical seals.

Recommended applications
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

Functional description
Buffered, gas-lubricated mechanical seals may only be used in conjunction with adequately pressurized gas (e.g. from a closed circular nitrogen pipeline provided by the operator). The minimum pressure overlay level ($\Delta p$) is specified for the individual seal types.

Main GSS functions:
- Filtering of the buffer and flushing gas
- Flow monitoring

Typical tasks for the GSS:
- Gas flushing for single seals
- Gas supply for tandem seals

Notes
Design, calculation and production acc. to ASME VIII, Div. 1. 3rd party inspection and other certificates on request.

LSC6 Leakage collection reservoir

Features
The EagleBurgmann leakage control systems of the LSC6000-A4 range are utilized to collect condensing or mixed phase leakage – vapor passing through. A level indicator is installed to determine when the tank needs to be drained. A pressure gauge tracks and indicates seal leakage.

Advantages
- Leakage collection tank with sight-glass
- Modular system: combination with a wide range of monitoring instruments possible

Recommended applications
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

Functional description
The LSC6000-A4 leakage control system is used to discharge leakage from liquid-lubricated single seals with downstream safety gas seals where the leakage is liquid under atmospheric conditions.

Notes
Design and production available in accordance with EU Pressure Equipment Directive PED 97/23 EC. Design, calculation and production available acc. to ASME VIII, Div. 1. 3rd party inspection, ASME stamp on request.

Installation
P&ID for LSC6000-A4 Leakage collection reservoir
A From mechanical seal
B To vapor collection system
C Drain

**Plan 76**

**SPP6 Leakage detection system**

**Features**
The EagleBurgmann leakage control systems of the SPP6000-A4 range consist of a pressure transmitter which is supplied together with a block and bleed valve as well as an orifice and drain valve.

**Advantages**
- Compact design
- Easy to integrate in existing piping systems.

**Recommended applications**
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

**Functional description**
The SPP6000-A4 leakage control system is used to detect leakage from single seals. In case of a seal failure, the SPP6000-A4 is required to monitor excessive leakage. If the seal leakage exceeds a certain value, the bushing/orifice will limit the amount of leakage leaving the seal gland. Consequently, the pressure will increase on the upstream side of the inner bushing. The pressure is monitored by means of the transmitter which will provide information about seal performance and seal failure.

Consulting & engineering

After establishing and analyzing all of the seals in a system, we work out standardization concepts based on the as-is status. The results we are hoping for are to reduce the number of seal types, sizes and materials used, and to improve the key figures of the system. We advise you relating to codes of practice and statutory regulations, and indicate what actions need to be taken.

Maintenance

In the plant or in the service center, qualified fitters and technicians look after all the aspects of seal maintenance: installation, startup, servicing, conversion, overhaul and repair. We record and document functionally relevant data (fault causes, measures for repair, costs). This means it is possible to assess seal operating times and maintenance costs on a continuous basis, thereby defining measures for extending service intervals.

On-site service

Our on-site service includes the components of an overhaul service, conversions and service container. We deploy a service unit directly on your premises: equipped with the basic suite of seals or a stock of seals discussed with you in advance, and staffed by qualified personnel. On-site, our work includes producing the necessary gaskets, ensuring that the documentation is complete and advising our customers on selecting and installing seals. Our range of services is rounded off by complete conversions (e.g. acc. to TA-Luft).

Inventory management

Based on your individual requirements and the applicable quality regulations, we develop a concept for inventory management of complete seals and spare parts. Furthermore, we optimize stocking on site or in the EagleBurgmann service center. In this way, you can reduce your administration overhead and concentrate on your key operations.

Seminars & training

We offer an extensive range of continuing education programs in seal technology. For service and maintenance personnel, skilled staff and engineers from various branches of industry such as refining, chemicals, power generation, foodstuffs, paper and pharmaceuticals. Our range includes group seminars, individual training and seminars specifically tailored to your requirements. At our premises or at a location of your choice.

Technical analysis & support

A team of seal specialists is responsible for rectifying process malfunctions or “bad actors”. The latest methods such as thermography or data logging are used for diagnosing positions that are critical for the operation of the system and for working out measures to rectify them. In our research and development centers, we perform realistic tests on test rigs or in original pumps. The objective is to extend the MTBF and to increase system serviceability by individual and constructive solutions.

Service agreements

We offer our customers specific agreements that can be combined from the six service modules. Whether for individual seal systems, critical process elements, specific system areas or an extensive seal service for complete plants: the modular structure of our service makes it possible to satisfy individual requirements. With our tried-and-tested monitoring instrument, SEPRO, we can also record all data relevant for the seals for documentation and evaluation purposes.
EagleBurgmann is one of the internationally leading companies for industrial sealing technology. Our products are used everywhere where safety and reliability are important: in the oil and gas industry, refining technology, the petrochemical, chemical and pharmaceutical industries, food processing, power, water, mining, pulp & paper, aerospace and many other spheres. Every day, more than 6,000 employees contribute their ideas, solutions and commitment towards ensuring that customers all over the world can rely on our seals. Our modular TotalSealCare service underlines our strong customer orientation and offers tailor-made services for every application.
