Engineered seals

Beyond API specifications, EagleBurgmann offers a comprehensive range of engineered seals tailored to customer’s specification. Please inquire.

API piping plans applicable for 2CW-CW configuration

**Process side**

- **Plan 01**: Integral (internal) recirculation from the pump discharge to the seal chamber.
- **Plan 02**: Dead-ended seal chamber with no recirculation of flushed fluid. Flush connections plugged.
- **Plan 03**: Circulation between the seal chamber and the pump created by the design of the seal chamber. Flush connections plugged.
- **Plan 04**: Recirculation from the pump discharge through a flow control orifice and back into the pump suction or pump suction piping.
- **Plan 13**: Recirculation from the pump discharge through a flow control orifice and back into the pump suction or pump suction piping.
- **Plan 14**: Recirculation from the pump discharge through a flow control orifice into the seal chamber. The solids are delivered to the pump suction line.
- **Plan 21 (22)**: Recirculation from the pump discharge through a flow control orifice and a cooler (or Plan 22 through a strainer, a flow control orifice and a cooler) into the seal chamber.
- **Plan 23**: Recirculation from a circulation device in the seal chamber through a cooler and back into the seal chamber.
- **Plan 11 (12)**: Recirculation from the pump discharge through a flow control orifice (or Plan 12 through a strainer and a flow control orifice) into the seal chamber.
- **Plan 32**: Injection of clean fluid into the seal chamber from an external source.
- **Plan 52**: Reciprocating providing buffer liquid for the outer seal of an arrangement 2 unpressurized dual seal. The buffer liquid shall be maintained at a pressure less than seal chamber pressure and less than 3 B ar (50 PSI).
- **Plan 55**: Unpressurized external buffer fluid system supplying clean buffer liquid for the outer seal of an arrangement 2 unpressurized dual seal. Buffer liquid is circulated by an external pump or pressure system.
- **Plan 65A**: Atmospheric leakage collection and alarm system for condensing leakage. Failure of the seal will be detected by a cumulative leakage into the system.
- **Plan 65B**: Atmospheric leakage collection and detection system for condensing leakage. Failure of the seal will be detected by a cumulative leakage into the system.

**Atmospheric side**

- **Plan 52**: Reciprocating providing buffer liquid for the outer seal of an arrangement 2 unpressurized dual seal. The buffer liquid shall be maintained at a pressure less than seal chamber pressure and less than 3 B ar (50 PSI).
- **Plan 65A**: Atmospheric leakage collection and alarm system for condensing leakage. Failure of the seal will be detected by a cumulative leakage into the system.
- **Plan 65B**: Atmospheric leakage collection and detection system for condensing leakage. Failure of the seal will be detected by a cumulative leakage into the system.

**Between seals**

- **Plan 55**: Unpressurized external buffer fluid system supplying clean buffer liquid for the outer seal of an arrangement 2 unpressurized dual seal. Buffer liquid is circulated by an external pump or pressure system.
- **Plan 65**: Unpressurized external buffer fluid system supplying clean buffer liquid for the outer seal of an arrangement 2 unpressurized dual seal. Buffer liquid is circulated by an external pump or pressure system.
- **Plan 65A**: Atmospheric leakage collection and alarm system for condensing leakage. Failure of the seal will be detected by a cumulative leakage into the system.
- **Plan 65B**: Atmospheric leakage collection and detection system for condensing leakage. Failure of the seal will be detected by a cumulative leakage into the system.

**Visit eagleburgmann.com**

**The API experts**

EagleBurgmann is one of the leading international system providers of sealing technology. For more than 20 years we have been actively contributing our expertise to developing and implementing the API 682 standard for the selection and application of seals and supply systems in centrifugal and rotary pumps.

**Solutions for more safety and productivity**

The new 4th edition of API 682 is in line with the latest achievements and current developments. EagleBurgmann offers the widest portfolio of seals and seal supply systems acc. to API 682 4th edition, and consequently has the optimum product for each API-compliant requirement. Technically mature, practical solutions that provide significantly greater safety and process reliability in refining technology, petrochemical, oil & gas and chemical industries.

**Subject to change.**
**Features**
- API 682 Category 2 and 3, Type A, Arrangement 2 seal
- Dual seal in face-to-back arrangement
- Balanced
- Cartridge unit
- Rotating multiple springs
- Integrated pumping device
- Suitable for pressure reversals

**Advantages**
- Universally applicable both for retrofits or original equipment
- Efficient stock keeping due to standardized components
- Extended selection of materials
- Optimized torque transmission
- Extended field of operation in terms of temperature and pressure
- Metal parts also in special materials available

**Recommended applications**
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Highly volatile hydrocarbons
- LPG plants
- API 610/ISO 13709 pumps
- Process pumps

---

**Operating range (see note on page 3)**
- Shaft diameter: \( d = 20 \ldots 110 \text{ mm (0.79" \ldots 4.33")} \)
- Pressure: \( p_1 = \ldots 42 \text{ bar (609 PSI)} \)
- Temperature: \( t = -40 \text{ °C} \ldots +176 \text{ °C (+220 °C)} \)
- Sliding velocity: \( v_g = 23 \text{ m/s (76 ft/s)} \)
- Axial movement: \( d \leq 40 \text{ mm ±1.0 mm} \)
  \( d > 40 \text{ mm ±1.5 mm} \)
- Engineered up to 260 °C (500 °F) with FFKM (K) secondary seals

**Materials**
- Seal rings: Blister resistant carbon, Silicon carbide SSiC (Q1), RBSiC (Q2)
- Mating rings: Silicon carbide SSiC (Q1), RBSiC (Q2)
- Secondary seals: EPDM (E), NBR (P), FKM (V), FFKM (K)
- Springs: Hastelloy® C-276 (M5)
- Metal parts: CrNiMo steel 316 (G), Duplex (G1), Hastelloy C-276 (M5)

**Recommended piping plans**
- Process side: 01, 02, 03, 11, 12, 13, 14, 21, 22, 23, 31, 32, 41
- Between seals: 52, 55
- Atmospheric side: 61, 62, 65A, 65B

---
Features

- API 682 Category 2 and 3, Type A, Arrangement 2 seal
- Dual seal in face-to-back arrangement
- Same seal size on inboard and outboard seal
- Balanced
- Cartridge unit
- Rotating multiple springs
- Solid seal faces

Advantages

- Compact design
- Low heat generation and power consumption due to narrow seal face width
- Longer seal life
- Pressure-balanced design prevents mating ring being forced out under reverse pressure
- No damage to shaft sleeve as dynamic O-Ring is not in direct contact with the sleeve

Recommended applications

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Highly volatile hydrocarbons
- LPG plants
- API 610/ISO 13709 pumps
- Process pumps

**Features**
- API 682 Category 2 and 3, Type A, Arrangement 2 seal
- Dual seal in face-to-back arrangement
- Same size of inboard and outboard seal
- Balanced
- Cartridge unit
- Stationary multiple springs
- Solid seal faces

**Advantages**
- Suitable for higher speeds
- Good followability due to no influence from run-out, squareness or vibration of the shaft
- Compact design
- Low heat generation and power consumption due to narrow seal face width
- Longer seal life
- Pressure-balanced design prevents mating ring being forced out under reverse pressure
- No damage to shaft sleeve as dynamic O-Ring is not in direct contact with the sleeve

**Recommended applications**
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Highly volatile hydrocarbons
- LPG plants
- API 610/ISO 13709 pumps
- Process pumps

**Materials**
- Seal rings: Blister resistant carbon, Silicon carbide SSiC (Q1), RBSiC (Q2)
- Mating rings: Silicon carbide SSiC (Q1), RBSiC (Q2)
- Secondary seals: FKM (V), FFKM (K), EPDM (E), NBR (P)
- Springs: Hastelloy® C-276 (M5)
- Metal parts: CrNiMo steel 316 (G)

**Operating range (see note on page 3)**
- Shaft diameter: d1 = 20 ... 110 mm (0.79" ... 4.33")
- Pressure: p = 60 bar (870 PSI)
- Temperature: −40 °C ... +176 °C (−40 °F ... +349 °F)*
- Sliding velocity: vg = 50 m/s (164 ft/s)
- Engineered up to 260 °C (500 °F) with FFKM (K) secondary seals

**Recommended piping plans**
- Process side:
  - 01, 02, 03, 11, 12, 13, 14, 21, 22, 23, 31, 32, 41

20 | HSH Cap screw
21 | Flush
F | Liquid buffer OUT
LBO | Liquid buffer IN
**Features**
- API 682 Category 2 and 3, Type B, Arrangement 2 seal
- Dual seal in face-to-back arrangement
- Same seal size of inboard and outboard seal
- Balanced
- Cartridge unit
- Rotating metal bellows
- Shrink fitted seal rings and solid mating rings

**Advantages**
- Compact design
- Bellows design allows use of balanced seal with plain sleeve
- Absence of dynamic O-Ring eliminates/reduces seal face hang-up
- Bellows design minimizes variation in face load due to shaft expansion or face wear
- Resistant to abrasive particles in the medium, no shaft or sleeve fretting
- Low heat generation and power consumption due to narrow seal face width
- Longer seal life

**Recommended applications**
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- LPG plants
- API 610/ISO 13709 pumps
- Process pumps

**Operating range (see note on page 3)**
- Shaft diameter: \(d_1 = 20 \ldots 110 \text{ mm (0.79” \ldots 4.33”)}\)
- Pressure: \(p = \text{vacuum} \ldots 20 \text{ bar (290 PSI)}\)
- Temperature: \(t = -40 \text{ °C} \ldots +200 \text{ °C (–40 °F} \ldots +392 °F)\)
- Sliding velocity: \(v_g \ldots 23 \text{ m/s (75 ft/s)}\)

**Materials**
- Seal rings: Blister resistant carbon
- Mating rings: Silicon carbide SSiC (Q1), RBSiC (Q2)
- Bellows: Hastelloy® C-276 (M5), option: Inconel® 718 (M6)
- Secondary seals: FKM (V), FFKM (K), EPDM (E), NBR (P)
- Metal parts: CrNiMo steel 316 (G), Hastelloy® C-276 (M5)

**Recommended piping plans**
- Process side:
  - 01, 02, 03, 11, 12, 13, 14, 21, 22, 23, 31, 32, 41
- Between seals: 52, 55
- Atmospheric side*: 61, 62, 65A, 65B
  * Throttle bushing on request

**Item** | **Description**
--- | ---
1 | Seal ring with bellows unit
2, 5, 12, 16 | O-Ring
3, 14, 20, 21 | Set screw

Features
- API 682 Category 2 and 3, Type C, Arrangement 2 seal
- Dual seal in face-to-back arrangement
- Balanced
- Cartridge unit
- Rotating metal bellows
- Shrink fitted seal rings and solid mating rings
- Compact design
- Suited for applications with extreme high and low temperatures
- Absence of dynamic O-Ring eliminates reduces seal face hang-up
- Bellows design minimizes variation in face load due to shaft expansion or face wear
- Resistant to abrasive particles in the medium, no shaft or sleeve fretting
- Also available in double ply design

Advantages
- Compact design
- Suited for applications with extreme high and low temperatures
- Absence of dynamic O-Ring eliminates reduces seal face hang-up
- Bellows design minimizes variation in face load due to shaft expansion or face wear
- Resistant to abrasive particles in the medium, no shaft or sleeve fretting

Features
Heat exchangers of the WEF6000-A4 range are used to cool process/barrier fluids in seal supply circuits. WEF6000-A4 heat exchangers are fully compliant with API 682 4th edition regulations. The process/barrier medium is directed through the tube, and the cooling medium is directed through the shell.

Venting and draining of the process/barrier medium side as well as the cooling water side is ensured. In addition, the heat exchangers can also be combined with a temperature instrument in the supply line to the mechanical seal (optional in accordance with API 682 4th edition).

Advantages
- Operating limits up to 45 bar/260 °C (653 PSI/500 °F) (tube side): suitable for a wide range of demanding operating conditions.
- Cooling water side and process side can be completely vented and drained.
- Seamless pipes on process side
- Special design without welding inside the cooler
- Higher cooling water velocity due to innovative cooler design
- Stainless steel 316L: high resistance to corrosive media

Recommended applications
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

Notes
Design and production in accordance with EU Pressure Equipment Directive PED 97/23 EC.

Cleaning: Process/barrier medium side and cooling water side: flush with a suitable solvent.

Notes:
1) Design data, permissible working values depend on the actual conditions of service.
2) Guidelines with buffer/barrier fluid water 60 °C (140 °F) – cooling water 20 °C (68 °F).
3) Guidelines with buffer/barrier fluid oil 60 °C (140 °F) – cooling water 20 °C (68 °F).
Features

Heat exchangers of the WEL6000-A4 range (shown here: WEL6002-A4) are used to cool process/barrier fluids in seal supply circuits. The heat exchangers are made of helical, laserwelded finned tubes. The cooling medium is ambient air. It is important, therefore, for WEL heat exchangers to be installed in well ventilated places indoors or, ideally, outdoors. There is a choice of three different basic versions of the WEL6000-A4 range as well as supplied fully assembled together with valves, base frame and other system components.

Advantages

- Operating limits up to 44 bar/260 °C (638 PSI/500 °F) (tube side): suitable for a wide range of demanding operating conditions.
- Can be completely vented and drained
- Seamless pipes
- Stainless steel 316L: high resistance to corrosive media

Recommended applications

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

Design and production in accordance with EU Pressure Equipment Directive PED 97/23 EC.
Design, calculation and production acc. to ASME VIII, Div. 1 (cooler not subject to ASME stamp requirements, piping <6")

Other versions on request.

1) Design data, permissible working values depend on the actual conditions of service.
2) Guidelines with buffer/barrier fluid water 60 °C (140 °F) – ambient temperature 20 °C (68 °F); moved air at min. 0.7 m/s (2.3 ft/s); product flow rate 8 l/min.
3) Guidelines with buffer/barrier fluid oil 60 °C (140 °F) – ambient temperature 20 °C (68 °F); moved air at min. 0.7 m/s (2.3 ft/s); product flow rate 8 l/min.
4) Version with screwed connection G1/2" available as an option.
ZYA6 Cyclone separator

**Features**
The ZY6000-A4 range is available in three versions:

- **ZYA6000-A4:** Cyclone separator for high flow rates and high pressures.
- **ZYB6000-A4:** Cyclone separator for high flow rates and high pressures; 100 % X-ray capability.
- **ZYC6000-A4:** Cast version, block-type design with integral flanges.

**Advantages**
- Contamination is automatically conveyed to the suction nozzle of the pump: maintenance-free mode of operation for guaranteed reliability
- High filtration efficiency
- Wide range of products for the optimum solution for every application
- ZYA6000-A4 and ZYB6000-A4: available for operating pressures of up to 200 bar (2,900 PSI)
- ZYC6000-A4 in block-type design with integrated flange connections: low space requirements because of compact design

**Functional description**
Cyclone separators of the ZY6000-A4 range are used to clean mainly aqueous liquids containing contamination such as dirt and solids (e.g., in circulation systems of sewage, sludge or pipeline pumps).

The best possible filtration efficiency is achieved when the specific weight of the solids is much higher than that of the carrier liquid and when the differential pressure is as large as possible within the permissible pressure range (min. 1.7 bar (24.7 PSI) in accordance with API 682).

The viscosity of the medium is a factor that also needs to be taken into account.

**Recommended applications**
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

**Installation**
P&ID for ZY6000-A4 Cyclone separators
A Contaminated liquid IN
B Clean liquid OUT
C Separated liquid OUT

**Features**
The EagleBurgmann flush unit of the SPX6000-A4 range consists of a manifold with integrated inline filter supplied together with a needle valve and pressure gauge. Optional available with temperature gauge and/or flow indicator. The unit is used to control the flushing of a mechanical seal.

**Advantages**
- Compact design due to integral filter
- Modular concept – optimal monitoring equipment available

**Recommended applications**
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

**Functional description**
The SPX6000-A4 flush unit continuously supplies flushing media from an external source to the mechanical seal. This plan is almost always used in combination with a throat bushing which serve as a throttle device to maintain a higher pressure in the stuffing box to isolate the pumped product from the seal chamber.

**Item**
- 1: Pressure indicator
- 2: Needle valve
- 3: Integral filter
- 4: Valve

Features
The EagleBurgmann barrier/buffer fluid systems of the TSA6000-A4 range meet all the requirements to supply mechanical seals in accordance with the API682 4th edition guidelines. The vessels are equipped with all essential connections for fitting additional components. The range is available in two standard vessel sizes with dished heads, and a bottom-flanged version which can be dismantled (TSB6000-A4) is also available. The modular system allows the TSA6000-A4 vessels to be combined with a wide range of system components such as level transmitter, pressure transmitter, base frame, etc.

Advantages
- Operating limits up to 44 bar/260 °C (638 PSI/500 °F): suitable for a wide range of demanding operating conditions
- Robust design with weld-pad type sightglass for optimum visual level monitoring
- Modular system: combination possible with a wide range of system components

Recommended applications
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

Notes
Design and production available in accordance with EU Pressure Equipment Directive PED 97/23 EC. Design, calculation and production available acc. to ASME VIII, Div. 1. 3rd party inspection, ASME stamp on request.

Functional description
The TS system performs all the basic functions of a barrier/buffer system for the operation of dual seals:
- To pressurize the barrier/buffer chamber
- Leakage compensation
- Barrier/buffer fluid is circulated by thermosiphon effect or forced circulation system
- To cool the seal
- To selectively absorb product leakage and prevent dry running (tandem arrangement)

Use compressed air or nitrogen for pressurization; pressurization is monitored by a pressure transmitter (default). The incorporated level transmitter issues a signal whenever the level of barrier/buffer fluid is too low.

**Features**
The EagleBurgmann leakage control systems of the LSA6000 range in accordance with API Plan 65A consist of a leakage collection tank with integrated orifice and overflow pipe. The level can be monitored with the differential pressure transmitter which is supplied together with a five-way manifold valve.

**Advantages**
- Seal failure detection
- Safe discarding of excessive seal leakage
- To ensure durability, all components are corrosion resistant.

**Recommended applications**
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

**Functional description**
In accordance with API Plan 65A, the LSA6000 leakage control system is used to discharge leakage from single seals. The outboard leakage is collected in an external tank; the leakage volume is monitored (level in the tank).

**Notes**
3rd party inspection, ASME stamp on request.

EagleBurgmann is one of the internationally leading companies for industrial sealing technology. Our products are used everywhere where safety and reliability are important: in the oil and gas industry, refining technology, the petrochemical, chemical and pharmaceutical industries, food processing, power, water, mining, pulp & paper, aerospace and many other spheres. Every day, more than 6,000 employees contribute their ideas, solutions and commitment towards ensuring that customers all over the world can rely on our seals. Our modular TotalSealCare service underlines our strong customer orientation and offers tailor-made services for every application.

Features
In accordance with API Plan 65B, the EagleBurgmann leakage control systems of the LSB6000 range consist of a leakage collection tank with valve and overflow pipe. The level can be monitored with the differential pressure transmitter which is supplied together with a five-way manifold valve.

Advantages
- Seal failure detection
- Safe discarding of excessive seal leakage
- To ensure durability, all components are corrosion resistant.

Recommended applications
- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

Functional description
In accordance with API Plan 65B, the LSB6000 leakage control system is used to discharge leakage from single seals. The outboard leakage is collected in an external tank, the leakage volume is monitored (level in the tank).

Notes
Design and production available in accordance with EU Pressure Equipment Directive PED 97/23 EC. Design, calculation and production available acc. to ASME VIII, Div. 1. 3rd party inspection, ASME stamp on request.

**SPT6 Temperature indicator**

**Features**

The measuring unit of the SPT6000-A4 range is used to visually monitor the operating temperature.

The measuring unit consists of a bi-metallic temperature gauge (NG100) with protective sleeve installed in a measuring block incl. drain connection.

**Advantages**

- Operating limits up to 45 bar/260 °C (653 PSI/500 °F) (design parameters)
- Temperature indicating range up to 200 °C (392 °F)
- Wetted parts: Stainless steel 316L for high resistance to corrosive media

**Recommended applications**

- Refining technology
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology

¹ Design data, permissible working values depend on the actual conditions of service.
Consulting & engineering
After establishing and analyzing all of the seals in a system, we work out standardization concepts based on the as-is status. The results we are hoping for are to reduce the number of seal types, sizes and materials used, and to improve the key figures of the system. We advise you relating to codes of practice and statutory regulations, and indicate what actions need to be taken.

Maintenance
In the plant or in the service center, qualified fitters and technicians look after all the aspects of seal maintenance: installation, startup, servicing, conversion, overhaul and repair. We record and document functionally relevant data (fault causes, measures for repair, costs). This means it is possible to assess seal operating times and maintenance costs on a continuous basis, thereby defining measures for extending service intervals.

On-site service
Our on-site service includes the components of an overhaul service, conversions and service container. We deploy a service unit directly on your premises: equipped with the basic suite of seals or a stock of seals discussed with you in advance, and staffed by qualified personnel. On-site, our work includes producing the necessary gaskets, ensuring that the documentation is complete and advising our customers on selecting and installing seals. Our range of services is rounded off by complete conversions (e.g. acc. to TA-Luft).

Inventory management
Based on your individual requirements and the applicable quality regulations, we develop a concept for inventory management of complete seals and spare parts. Furthermore, we optimize stocking on site or in the EagleBurgmann service center. In this way, you can reduce your administration overhead and concentrate on your key operations.

Seminars & training
We offer an extensive range of continuing education programs in seal technology. For service and maintenance personnel, skilled staff and engineers from various branches of industry such as refining, chemicals, power generation, foodstuffs, paper and pharmaceuticals. Our range includes group seminars, individual training and seminars specifically tailored to your requirements. At our premises or at a location of your choice.

Technical analysis & support
A team of seal specialists is responsible for rectifying process malfunctions or “bad actors”. The latest methods such as thermography or data logging are used for diagnosing positions that are critical for the operation of the system and for working out measures to rectify them. In our research and development centers, we perform realistic tests on test rigs or in original pumps. The objective is to extend the MTBF and to increase system serviceability by individual and constructive solutions.

Service agreements
We offer our customers specific agreements that can be combined from the six service modules. Whether for individual seal systems, critical process elements, specific system areas or an extensive seal service for complete plants: the modular structure of our service makes it possible to satisfy individual requirements. With our tried-and-tested monitoring instrument, SEPRO, we can also record all data relevant for the seals for documentation and evaluation purposes.
EagleBurgmann is one of the internationally leading companies for industrial sealing technology. Our products are used everywhere where safety and reliability are important: in the oil and gas industry, refining technology, the petrochemical, chemical and pharmaceutical industries, food processing, power, water, mining, pulp & paper, aerospace and many other spheres. Every day, more than 6,000 employees contribute their ideas, solutions and commitment towards ensuring that customers all over the world can rely on our seals. Our modular TotalSealCare service underlines our strong customer orientation and offers tailor-made services for every application.
